</table>

TOOLS REQUIRED:
- Trim stick (nylon)
- #2 Phillips screw driver
- Side Cut Pliers
- (Awl) Center Hole Punch
- Drill Bit Stops
- 90 degree small drill designed for small spaces
- 1/8", 3/8" & 7/16" pilot point drill bits
- Electrical Tape

PRE-INSTALLATION WARNINGS, CAUTIONS, CRITICAL STEPS, and NOTES:
- Dealer Installation Recommended. Instructions may refer to Service Manual.

⚠️ CAUTION ⚠️

- This accessory must only be installed as specified in these instructions
- Ensure that parts are securely fitted and will not compromise the safe function of vehicle systems
INSTALLATION OVERVIEW (Normal):

A) Controller Module
B) Foot Well Lamps
C) Cup Holder Lamps
D) Switch
INSTALLATION PROCEDURE:

1) Apply park brake
2) Turn ignition switch to "ON" position
3) Record the customer radio presets and other presets as required

<table>
<thead>
<tr>

</tbody>
</table>

4) Adjust front seats to full rearward position
   Place gear selector in "N" neutral

5) Turn ignition switch to "OFF" position

6) Disconnect the negative battery terminal.
   a) Lower both the driver and passenger windows to prevent damage.
   b) Disconnect the negative battery terminal.
INSTALLATION PROCEDURE: (continue)

7) Remove gear selector knob
   a) With shift lever in neutral position, use nylon pry tool to release finisher ring at bottom of shift knob and push boot down.
   b) Remove retaining clip holding shifter knob to selector lever.
   c) Lift shift knob upward to remove and reinstall clip with bend upward. Set shift knob aside.

8) Console finisher panel clip locations
   **NOTE:** Apply Protective Tape to console along top edges and rear corners to protect leather.

9) Console finisher panel clip detail.

10) Remove console finisher panel
    a) Starting at the rear of the AT finisher with nylon pry tool to release rear clips.
    b) Lift finisher upward, holding at both rear corners to release clips without twisting.
    c) When all side clips are released, pull finisher toward rear of console to remove.
    d) Disconnect connectors and set finisher aside.

11) Identify Connectors
   ![Connectors Diagram](image)
   
   White - AUX  
   Green & Grey - USB  
   Brown - Start  
   Black - Immobilizer
12) Carefully pry out the center footwell panel from the passenger side of the center console
   a) Pull out at center and slide to the rear.

   **NOTE:** Be sure the front retainer clip stays with the panel.

13) Remove three (3) Phillips head screws from the underside of the glove box.

14) Remove glove box
   a) Remove five (5) Phillips head screws from inside the glove box compartment.
   b) Disengage clips by pulling glove box compartment rearward.

15) Disconnect connectors from glove box
   a) Disconnect the harness retaining clip.
   b) Carefully unplug and remove the harness connector and the glove box lamp.
   c) Fully remove the glove box assembly and set aside.

16) Secure down Harness Labels
   a) To prevent any squeak and rattle, wrap all labels (on accessory and on harness) around and tape down.
INSTALLATION PROCEDURE: (continue)

17) Access to foot well lamp installation location on the back of the glove box is from foot well area.

**NOTE:** Service Connector location on right A-Pillar.

18) Attach passenger side lamp to back of glove box.
   a) Securely attach lamp to molded boss with two (2) M5X16M screws supplied in kit.

**NOTE:** Lamp orientation with bracket up.

   b) Secure lamp harness to glove box using 1 piece of carpet tape provided in kit.

19) Attach ECU to inside of vehicle console
   a) Peel release liners off ECU adhesive tapes.

   b) Position ECU on left inner side of console, just behind cross brace as pictured.

   c) Firmly press module to console wall and hold with **15lb** for 30 seconds.

20) Locate the passenger side Accessory Connector plug. It will be next to the glove box on the right side A-Pillar.

**Note:** A previously installed accessory may be present. If so, carefully remove the accessory connector harness from the accessory connector plug before posi-tapping. It is recommended that all posi-tapping be completed before reattaching the accessory connector harness to the plug.
INSTALLATION PROCEDURE: (continue)

21) Connect lighting power harness to the accessory connector harness using posi-taps.
   a) Connect the **BLACK** wire from the power harness to the **BLACK** wire on the accessory connector harness.
   b) Connect the **ORANGE** wire from the power harness to the **ORANGE** wire on the Accessory Connector Harness.
   c) Connect the **PINK** wire from the power harness to the **PINK** wire on the Accessory Connector Harness.
   d) Connect the **YELLOW** wire from the power harness to the **YELLOW** wire on the Accessory Connector Harness.
   e) Connect the **BROWN** wire from the power harness to the **VIOLET** wire on the Accessory Connector Harness.

*NOTE: Accessory Connector Harness (PN 999Q9 AY001) NOT INCLUDED in kit.*

NOTE: Follow Posi-Tap Instructions (pages 8-12) and then connect Accessory Connector to Service Connector.

22) Route interface harness.
   a) Route harness under carpet.
   b) Use carpet tape supplied in kit to secure harness to floor padding.

23) Routing main power harness.
   a) Route main lamp harness behind HVAC drain tube and to center console area.
   b) Route main lamp harness to controller following the routing of the vehicle harness.
   c) Install 2 wire ties as shown in Fig. 23. Trim excess length of wire tie after secured.
1) Tap vehicle wire.
   a) Identify and confirm (test if necessary) the correct vehicle wire to be tapped.
   b) Remove cap (slot side) from tap body.
   c) Slide cap around single vehicle wire.
   d) Position cap ≥ 12.7mm (0.50in) away from the back of the vehicle connector.
   e) Tighten the tap TIGHT with finger pressure.
   f) Tighten by another quarter turn.

   **NOTE:** Figures are not to scale. Do not re-use the tap.

2) Inspect the tap to ensure correct installation.

   **NOTE:** Avoid putting pressure on the vehicle wire and tap for the remainder of the installation.

3) Tap accessory wire.
   a) Remove tap (non-pierce) side from tap.
   b) Remove the protective stub from the wire.
   c) Insert wire through the non-pierce side opening.
   d) Spread the individual strands into fan shape.
   e) Insert wire into the tap body and ensure that it is all the way in.
   f) Tighten the tap TIGHT with finger pressure.
   g) Tighten by another quarter turn.

4) Confirm the tapped accessory wire.
   a) Pull on the wire lightly to ensure connection.
   b) Inspect the tap to ensure correct installation.
   c) Test the signal to ensure that it is working.

5) Forming strain relief loop (always required)
   a) On the tapped wire of the non-pierce side; starting at point b1), measure 50.8mm (2in) to point b3). Make the first bend of the loop b2), half the distance measured 25.4mm (1in), and up toward the body of the posi-tap, make the second bend of the loop b3). i
6) Secure the tap.
   a) Secure the tapped wire on the non-pierce side to the body of the tap with electrical tape (≥ 2 revolutions).
   b) Secure the body to harness where vehicle wire is being tapped with electrical tape (≥ 2 revolutions).

7) Secured tap.
   a) Secured tap should look similar to Fig. 7

8) Secure the tap.
   a) Secure the tapped wire on the non-pierce side to an existing anchor point such as harness, clip, metal structure, etc. within 1" (25.4 mm) with electrical tape (≥ 2 revolutions)
   b) Secure the body to an existing anchor point such as harness, clip, metal structure, etc. nearby with cable tie or electrical tape (≥ 2 revolutions).

9) Form drip loop
   Note: Apply when wire section near Posi-Tap termination is in wet area (engine room, doors, trunk, interior along the floor, etc.)). Posi-Tap must be located in non-wet area. Insert this figure and
   a) Form 1st loop away from Posi-Tap. Bend radius is ≥ 6mm (.25”).
   b) Form 2nd loop. Diameter is ≥ 25.4mm (1”).
   c) Measure to make sure that the height from the bottom of the drip loop to the middle of the Posi-Tap is ≥ 50 mm (2”).

Posi-Tap™ is protected by patent # 5,228,875 5,695,369 5,868,589 6,692,313 Jap 2881414 Aus 708700 Tia 103534 Can 2204826 Mex 200626 Korea 477279 China Z197105562.9 & others pending.
Wrapping Posi-taps with foam to prevent squeak and rattle.

1) Prep for foam wrap.
   a) Make sure the accessory taps have been wrapped appropriately as detailed previously and as shown in Fig 1.

   ![Fig. 1](image1)

2) Pre-foam protective wrap
   a) Starting at the heat shrink, firmly wrap the posi-tap bundle with electrical tape or non-adhesive wire harness tape, making sure to overlap the previous revolution.
   Note: If using non-adhesive tape secure at the end of wrap with electrical tape ≥ 2 revolutions.

   ![Fig. 2](image2)

3) Finished protective wrap
   a) Make sure the finished wrap looks similar to Fig. 3

   ![Fig. 3](image3)
IF securing w/ foam strips.

4) Foam wrap for posi-tap bundle (foam strips)
   a) Wrap the posi-tap bundle with foam tape, following a pattern similar to the electrical tape, making the best use of foam strips provided.

5) Finished foam wrap for bundle (strips-top view)
   a) Make sure the finished wrap looks similar to Fig. 5

6) Finished foam wrap for bundle (strips-side view)
   a) Make sure the finished wrap looks similar to Fig. 6
IF securing w/ foam square.

7) Foam wrap for posi-tap bundle (foam rectangle)
   a) Remove backing material from foam square.

8) Finished foam wrap for bundle (rectangle-top view)
   a) With the foam square length wise, place the posi-tap bundle on half of the foam square. Gently crease along the width.

9) Finished foam wrap for bundle (rectangle-side view)
   a) As the foam square is folded over the posi-tap bundle, make sure the bundle is centered in the foam.

Posi-Tap™ is protected by patent # 5,228,875 5,695,369 5,868,589 6,692,313 Jap 2881414 Aus 708700 Tia 103534 Can 2204826 Mex 200626 Korea 477279 China Z197105562.9 & others pending.
INSTALLATION PROCEDURE: (continue)

24) Carefully pry out the center footwell panel from the driver side of the center console.
   a) Pull out at center and slide to the rear.

   **Note:** Be sure front retainer clip stays with side panel.

25) Pass driver side lamp thru console under HVAC unit.
   a) Pass driver side lamp to from right footwell area left footwell area.
   b) Route lamp harness with connector along main harness to rear of console.

26) Place the glove box assembly back into the passenger footwell. Reconnect the valet wiring connector and the glove box lamp connector.

27) **Reinstall** the glove box.
   a) Reinstall five (5) Phillips head screws from inside the glove box compartment.

28) Reinstall three (3) Phillips head screws from the underside of the glove box.
CAUTION

. When drilling, be extremely careful of modules and harnesses on back of panel.
. Always use drill bit stop to control drilling depth to 1/4".

29) Mount lamp on driver lower instrument panel.
   a) Tape mounting area shown (Fig 29) to protect panel
   b) Using driver foot well lamp hole location template B, mark and drill 1/8" pilot hole
   c) Finish hole with 3/16" (8mm) drill bit and deburr.
   d) Remove tape placed in Step a) before attaching footwell lamp to instrument lower cover
   e) Using two push-pin fasteners supplied in kit to secure lamp to instrument lower cover.

30) Secure lamp harness with wire ties.
   a) NOTE LAMP ORIENTATION
      LED must shine downward.
   b) Install 2 wire ties as shown in Fig. 30.
   c) Trim excess tag end from wire ties.

31) Remove center console finisher panel
   a) Refer to page 4 - Fig.10 for finisher removal.
   b) Place finisher panel on protected work area.

   NOTE: Work area should be clear of all items that may present a scratch potential.
   Work surface should be soft material.

32) Remove console finisher panel harness.
   a) Release harness connectors.
   b) Release harness anchor points.
   c) Set harness to side.
INSTALLATION PROCEDURE: (continue)

33) Paper Templates for cup holder hole locations.
   a) Print paper templates.
   b) Measure 1'' scale box to confirm size.
   c) If scale box is too large, reduce image %.
   d) If scale box is too small, increase image %.
   e) Use scissors to cut out each template.
   f) Cut line at each end to form slit.

34) Make hole location template collar.
   a) Engage slits and tape flat to make collar.

35) Align hole location template collars.
   a) Align front template collar with front cup holder and place in position as shown.
   b) Align rear template collar with rear cup holder and place in position as shown.

36) Mark front and rear hole locations.
   a) Use an awl or center punch to mark each hole location.

37) Mark and drill pilot hole.
   a) Remove paper template collars.
   b) Drill a 1/8'' pilot hole for each location.

CAUTION

- When drilling, be extremely careful of modules and harnesses on back of panel.
- Always use drill bit stop to control drilling depth to 1/4''.
INSTALLATION PROCEDURE:  (continue)

**CAUTION**

- When drilling, be extremely careful of modules and harnesses on back of panel.
- Always use drill bit stop to control drilling depth to 1/4".

38) Drill hole for lamp lens opening.
   a) Drill a 7/16" hole for each location.
   b) Inspect inner wall of cup holders for burr.
   c) Carefully remove burr if necessary.

39) Prepare cup holder for LED lamp installation
   a) Remove dust/debris from drilling steps.
   b) Use a clean cloth to wipe off cup holder.
   c) Install lamps one at a time, front lamp first.

40) Cup holder lamp orientation
   a) Peel adhesive tabs from front lamp.
   b) Align lamp with cup holder, with harness exiting lamp toward bottom of cup holder.
   c) Insert lamp lens in hole and contact adhesive pad to side of cup holder.
   d) Inspect alignment and then firmly press lamp against cup holder to bond.
   e) Repeat steps (a - d) for rear lamp.

41) Installing cup holder lamps
   a) Press front lamp firmly and hold.

   **NOTE:** Apply 15 lbs pressure for 20 seconds

   b) Repeat for rear lamp.
42) Installing Secondary Tape on Cup Holder Lamps.
   a) Peel off adhesive and non-adhesive side papers from tape.
   b) Keeping proper alignment, place tape at center of rear side of cup holder lamps as shown in Fig. 42a.
   c) Wrap tape along sides of lamp. Press firmly & apply even **15lbs pressure for 20 seconds** on either edges of lamp, as shown.
   d) Ensure there are no air gaps on sides of lamp.

   e) Press tape firmly & apply even **15lbs pressure for 20 seconds** on sides of the tape.
   f) Inspect installation to verify right installation, as shown in Fig. 42b.
   g) Repeat Steps a) to f) for other lamp.

43) Reinstall console finisher panel harness.
   a) Return harness to original position.
   b) Make sure harness and connectors are securely attached to original anchor points.

44) Reconnect harness connectors
   a) Firmly insert harness connector.
   b) Listen for "Click" to confirm.
   c) Apply a slight tug to connector to check.

**Note:** Number of connectors will vary by model and vehicle equipment.
INSTALLATION PROCEDURE:  (continue)

45) Route and secure cup holder lamp harness
   a) Route harness toward rear of finisher.
   b) Route harness along finisher harness.
   c) Secure lamp harness using 2 wire ties.
   d) Trim off excess wire tie as shown.

46) Switch location & console storage bin preparation.
   a) Installed position and orientation of switch on front wall of console bin.

47) Console storage bin preparation.
   a) Print switch location paper template.
      Measure 1" scale block to ensure the template printed to the correct size.
   b) Lift armrest lid to expose inner wall.
   c) Place drill guide fixture on FRONT wall.
   d) Drill 1/8" pilot hole using 1/4" hex drive bit and thumb wheel driver.

48) Drill switch harness access hole.
   a) From opposite side, use 3/8" bit and 6" extension to cut access hole.

   Note: Route extension and drill bit over console cross brace, insert drill bit pilot point and cut hole.

49) Install switch
   a) Use template as guide to install switch.
   b) Peel adhesive backing from switch.
   c) Insert harness connector in hole and route the harness through hole.
   d) Align top of switch parallel to recess line.
   e) Contact switch adhesive to console.
   f) Press firmly and hold.
   g) Apply 15 lbs pressure for 20 seconds.

   NOTE: Once switch is stuck in place, do not try to remove for realignment or any other reason. Damage to switch will occur.
50) ECU Connection Port Identification
   a) 5 pin OUT ports
      Plug footwell lamps into any 5 pin OUT port.
      Plug cup holder lamps into any 5 pin OUT port.
   b) Plug power harness into 7 pin VEHICLE port.
   c) Plug switch into 4 pin SWITCH port.

   **NOTE:** Make sure not to pull or bend the switch harness at the back of the switch.

51) Switch connection
   a) Route main harness to controller module.
   b) Plug main harness into 7 pin VEHICLE port.
   c) Press firmly, listen for "Click" and give a slight tug to check.
   d) Route switch harness to controller module.
   e) Plug switch harness into 4 pin OUT port.
   f) Press firmly, listen for "Click" and give a slight tug to check.

52) Reinstall console finisher panel
   a) Position finisher panel over console.
   b) Connect finisher panel harness connectors.

   **NOTE:** Conduct Function Check for ALL Systems
   c) Align clips and lower into position.
   d) Press down on finisher panel to engage clips.

53) Reinstall Gear Selector Knob
   a) Check clip for proper installation on knob.
   b) Place knob on lever and press down.
   c) Pull boot up and secure retainer ring to base of shift knob.
**INSTALLATION PROCEDURE:**

---

54) Remove the driver side factory installed incandescent foot well light.
   
   a) Locate the incandescent bulb and socket underneath the steering wheel.
   
   b) Remove the socket and bulb together from the vehicle trim panel by rotating the socket counter-clockwise a 1/4 turn.
   
   c) Remove the bulb by pulling it straight out.
   
   d) Discard the bulb appropriately.
   
   e) Replace the socket in the vehicle trim panel.

55) Cover the empty driver side factory installed incandescent foot well light socket.

   a) Place a piece of 25mm x 25mm adhesive backed foam over the socket opening.

   **NOTE:** Apply 15 lbs pressure for 20 seconds.

56) Remove the passenger side factory installed incandescent foot well light.

   a) Locate the incandescent bulb and socket underneath the glove box.
   
   b) Remove the socket and bulb together from the vehicle trim panel by rotating the socket counter-clockwise a 1/4 turn.
   
   c) Remove the bulb by pulling it straight out.
   
   d) Discard the bulb appropriately.
   
   e) Replace the socket in the vehicle trim panel.

57) Cover the empty passenger side factory installed incandescent foot well light socket.

   a) Place a piece of 25mm x 25mm adhesive backed foam over the socket opening.

   **NOTE:** Apply 15 lbs pressure for 20 seconds.
ACCESSORY CHECK: (Must for any accessory that uses the vehicle battery for power)

☐ Connect the battery negative terminal and tighten the nut to 5.4 N-m (47.8 lb-in)

☐ Check all Critical Installation Steps.

☐ Verify all wiring is secure and not exposed.

☐ Trim all excess cable ties flush.

☐ Turn ignition switch to "ACC" position.

☐ Confirm accessory main features and functions. Confirm cup holder and foot well lamps illuminate. Diagnostic flow chart is available on the next page for troubleshooting.

☐ Check all vehicle electrical systems that the accessory interfaces with.
  Vehicle electrical system 1 (Must for pre-wiring, overlay harness, and Posi-Tap)
  Vehicle electrical system 2 (Electrical system(s) where the accessory connects.)

RE-INSTALLATION OF REMOVED PARTS:

☐ Re-install all removed vehicle parts. Refer to the vehicle service manual as necessary.

⚠️ CAUTION

Use caution when re-installing interior components to avoid damage, scratches, or breaking of mounting clips. Refer to the vehicle service manual for more information.

FINAL INSPECTION:

☐ Verify re-installed trim parts for proper flush fit (no gap, no waviness, etc.).

☐ Verify all clips are fully engaged and locked.

☐ Verify re-installed trim parts are free from cracks, scratches or stress marks.

☐ Verify vehicle headliner, seat, steering wheel, center console, floor carpets, etc. are not soiled.

☐ Verify interior and exterior is not damaged.

☐ Turn ignition switch to "ON" and confirm proper operation of Vehicle Systems
  ☐ If equipped, verify all window and sunroof one touch operation and perform the reset procedure if necessary. Refer to the vehicle service manual for more details.
  ☐ Confirm proper audio function (AM, FM, SAT, CD and AUX).
FINAL INSPECTION:  (continue)

☐ Start engine and verify that there are no new Diagnostic Trouble Code. Turn ignition switch to "OFF".

☐ Place the Owner Manual, Quick Reference Guide, and/or other Manual in the glove box.

☐ If this vehicle will be returned to a dealer lot or showroom for an extended period of time, be sure the extended storage switch is placed in the "inventory" position. Refer to the Extended Storage Switch verbiage at the beginning of the 'INSTALLATION PROCEDURE' section.

☐ Re-program radio presets and other vehicle settings to the recorded settings. No need to do this step if the extended storage switch is placed in the "inventory" position.
**5.3.2.2x  ACCESSORY CONNECTORS MECHANIZATION**

**CAUTION**

This Accessory Service Connector is for use only with Genuine Nissan (or Infiniti) or Nissan (or Infiniti) approved accessories. Use of this connector with non Genuine Nissan (or Infiniti) or Nissan (or Infiniti) approved accessories or failure to follow the installation instructions for the connector contained in this package may result in damage to the accessory and/or your vehicle. Nissan (or Infiniti) is not liable for loss or damage due to improper installation or the installation of non Genuine or non approved accessories.

Pin location is referenced looking into wire side of connector.
