SERVICE BULLETIN

Classification: RS17-006c  Reference: NTB17-025c  Date: August 25, 2017

2013 – 2016 PATHFINDER; OCCUPANT CLASSIFICATION SYSTEM RETROFIT

This bulletin has been amended. Pages 18 and 20 have been revised. No other changes have been made. Please discard all previous versions of this bulletin.

APPLIED VEHICLES: 2013 – 2016 Pathfinder (R52)
                    2014 – 2015 Pathfinder Hybrid (R52)

SERVICE INFORMATION

The information in this bulletin is provided for customers who have concerns with their Occupant Classification System (OCS) operation after all campaigns have been completed.

Follow the steps in this bulletin to determine if this OCS retrofit procedure is applicable to the vehicle you are working on.

DETERMINE IF OCS RETROFIT APPLIES

1. Check Service COMM to confirm if OCS reprogramming campaign has been completed (R1607 / NTB16-054).

   Completed:
   - Write on the repair order the date it was completed and by which dealer.
   - Go to step 2.

   Not Completed:
   - Complete campaign R1607 / NTB16-054.
   - No further action needed. OCS retrofit does NOT apply.

Nissan Bulletins are intended for use by qualified technicians, not ‘do-it-yourselfers’. Qualified technicians are properly trained individuals who have the equipment, tools, safety instruction, and know-how to do a job properly and safely. NOTE: If you believe that a described condition may apply to a particular vehicle, DO NOT assume that it does. See your Nissan dealer to determine if this applies to your vehicle.
2. Verify and document the customer's concern (have the customer demonstrate the concern).

3. Using CONSULT-III plus, check for Airbag or OCS related DTCs.

   **No Airbag or OCS DTCs**: go to step 4.

   **Airbag or OCS DTCs stored**:
   - Refer to the Electronic Service Manual (ESM), section SRC – SRS Airbag Control System, for diagnostic and repair information.
   - OCS retrofit does NOT apply.

4. If all of the following are confirmed:
   - Campaign R1607 / NTB16-054 has been completed.
   - Customer concern has been confirmed and documented.
   - No Airbag or OCS DTCs are stored.

   **Then**

5. Perform the Service Procedure in this bulletin.
SERVICE PROCEDURE

WARNING: This procedure involves working under the passenger seat. The metal seat frame has sharp edges.

CAUTION: Handle interior trim carefully to avoid damage. Work with clean hands and clean tools to avoid dirt and stains. Use protective covers as needed.

IMPORTANT: Follow all cautions, warnings, and notes in the Electronic Service Manual (ESM) when working on or near a Supplemental Restraint System (SRS), such as an air bag or OCS components.

1. Turn the ignition ON, engine OFF.

2. Write down the radio settings.

3. Record (write down) any other customer settings that will be lost when the battery is disconnected.
   - Refer to the Electronic Service Manual (ESM) section PG-Power Supply, Ground, & Circuit Elements, for a listing of systems that may lose settings or memory when disconnecting the 12V battery.
     - Look in the PG section index for ADDITIONAL SERVICE WHEN REMOVING BATTERY NEGATIVE TERMINAL.
     - This list often includes items such as audio, HVAC, power windows, clock, etc.

4. Turn the ignition OFF.
5. Passenger seat removal:

**Manual seat**

a. Disconnect both battery cables, negative cable first.

b. Wait at least 3 minutes.

c. Remove the passenger seat from the vehicle.
   - Refer to the ESM, section SE-Seat, for seat removal information.

**Power seat**

a. Remove the passenger seat from the vehicle.
   - Refer to the ESM, section SE-Seat, for seat removal information.
   - The power seat may need forward/backward movement to access the mounting bolts. Follow the ESM for battery connection/disconnection.
   - Each time the battery is disconnected, wait at least 3 minutes before continuing.

6. Set the seat in a clean working area.

7. Remove the seatbelt buckle.
   - Buckle is held on with one bolt.
8. Unclip and raise the seat side trim.

9. Disconnect the seatbelt buckle electrical connector.

10. From under the seat, remove the old OCS harness and install the new one.

   - The OCS harness consists of the wiring and connectors between the OCS sensors, OCS control unit, and new seat belt buckle.

**IMPORTANT:**

   a. Disconnect **one** OCS harness connector or mounting clip, then

   b. Connect the new OCS harness connector or mounting clip before moving to the next one.

   - Disconnecting/connecting one at a time will ensure that the new harness is connected **exactly** as the old one.

   - Refer to images of the OCS harness on the next page.

   - Refer to images on pages 7, 8 and 9 for exact harness mounting points.
**EXAMPLE**

Old OCS harness and seatbelt buckle are removed.

**EXAMPLE**

New OCS harness and seatbelt buckle are installed

Notice the new harness and buckle have a new branch and connector

Continued on the next page.
For Power Seat: OCS Seat Harness Mounting Points continued

NOTE: Figure 8 shows a seat without climate control. For a seat with climate control the OCS harness routing and mounting is the same.

Figure 8
11. Replace the OCS control unit with the new one.
   - The OCS control unit is held on with 2 screws.
   - The OCS control unit is located under the front edge of the seat.

12. **For Manual Seat;** attach the clip of the new harness branch where shown in Figure 10.

13. Route the new branch/connector of the OCS harness through the seat frame as shown.
14. Remove the harness mounting clip from the new seatbelt buckle connector.
   - This clip will not be used.

15. Install the new seatbelt buckle.
   - Torque the mounting bolt to: 49 N·m (5.0 kg-m, 36 ft-lb)
   - Connect the 2 electrical connectors.

16. Cut 2 strips of flocking tape (J-50397-8); each strip about 5 inches long.
   - Flocking tape is part of the squeak and rattle kit – J-50397.
17. Wrap the flocking tape around the new electrical connector.
   - Wrap 1 strip around each side of the new connector as shown.

   **NOTE:** This connects the new branch from the seat belt with the new branch from the harness.

18. Route the tie-strap as shown.
   - Tie-strap is listed in the Parts Information.
   - Route the tie-strap through the slot in the seat and then under the seat cushion as shown.

19. Secure the new harness connector with tie-strap as shown.
   - Pull the tie-strap tight.
   - Cut off excess tie-strap.
20. Reattach the seat side trim.

21. Reinstall the seat into the vehicle in reverse order of removal.
   - Torque passenger seat mounting bolts to:
     48 N•m (4.9 kg-m, 35 ft-lb)
   - Torque bolts in the order shown.

22. If battery cables were not connected as part of the seat installation, reconnect them now, positive cable first.

23. Reset/reinitialize systems as needed.
   - Refer to the ESM section, PG – Power, Supply & Ground Elements for a listing of systems that require reset/initialization after reconnecting the 12V battery.
     - Look in the PG section index for ADDITIONAL SERVICE WHEN REMOVING BATTERY NEGATIVE TERMINAL.
     - This list often includes items such as audio, power windows, clock, etc.

24. Perform Zero Point Reset, using CONSULT III plus, on the next page.
Zero Point Reset

1. Prepare the vehicle for OCS zero point reset as follows:
   - **Level the vehicle.**
   - **No objects on the passenger seat or in the storage bin.**
   - **No occupants in the vehicle – including the servicing technician.**
   - PC is outside of the vehicle on a suitable support.
     - Do not set the PC on the vehicle.
   - Do not touch the vehicle during the OCS zero point reset.
   - Minimize vibrations of the vehicle.

2. Connect the plus VI to the vehicle.

3. Open / start CONSULT-III plus (C-III plus).

4. Turn the ignition ON, with engine OFF (engine not running/not in ready mode).

5. Wait for the plus VI to be recognized.
   - The Serial No. will display when the plus VI is recognized.

6. Select **Diagnosis (One System).**

7. Scroll C-III plus (All systems) and select **OCCUPANT DETECTION.**

---

Figure 1A

Scroll here

Step 7
8. Select **Zero point reset function**.

9. Select **Start**.

10. Select **Next**.
11. Select **Start** and then proceed to step 12.

- After selecting **Start**, if Figure 5A is displayed:
  a. Check the OCS control unit and confirm that harness connector is completely seated.
  b. Turn the ignition OFF and then restart procedure from step 4 on page 14.

![Figure 4A](image)

![Figure 5A](image)
12. Zero point reset will display “EXECUTING”.

![Figure 6A](image)

13. When finished, "Completed" will display next to “Current status”.
   - Select **End** and then proceed to step 14.

![Figure 7A](image)
14. Turn the ignition OFF and then back ON and observe the air bag warning light and front passenger airbag status light:

- The air bag warning light 🧑‍🔧 should illuminate for 7 seconds and then go out.

- The front passenger airbag status light 🧑‍🔧 should illuminate for 7 seconds and then either stay illuminated or go out depending on the occupation of the front passenger seat.

### Front Passenger Airbag Status Light Operation

<table>

FRONT PASSENGER AIR BAG STATUS LIGHT OPERATION

NOTE: Please print this page and place a copy in the vehicle.

OCS SYSTEM OPERATION

The OCS system enables or disables the front passenger air bag depending on the weight applied to the front passenger seat. Front passenger air bag status (Enabled or Disabled) is indicated by the front passenger air bag status lamp pictured here.

- When the front passenger seat is empty, the passenger air bag status lamp should be ON (illuminated) which means the passenger air bag is Disabled.

- When the front passenger seat is occupied by an adult, the passenger air bag status lamp should be OFF (dark) which means the passenger air bag is Enabled.

- When the front passenger seat is occupied by a child, a child restraint, or a small adult, the passenger air bag status lamp should be ON (illuminated) which means the passenger air bag is Disabled.
